

# 2014 Asia-Pacific Community Meeting

Coauthors: Yan Liu, Gary Gu, Tao Chen

 Disclaimer: atsec (Beijing) Information Technology Co.,Ltd is an independent lab specializing in IT security evaluations.
 The authors do not represent any Chinese government agency or Chinese government-controlled lab. All information used for this presentation is publicly available on the Internet, despite the fact that most of them are in Chinese.

#### Introduction

- Best practise from a QSA atsec China
- Security Risk Management Practice from a service provider 99bill
- PCI Compliance experience sharing from a merchant Air China

#### Background: Rapid Growth in China's Electronic Payment Space

269 Number of non-financial payment organizations continue to grow.

62.36% E-payment penetration rate keeps rising.

1,800,000,000,000 Internet retail volume grows rapidly.

94% E-payment sector remains highly concentrated.

## **Background: Payment Innovations with Underlying Risk Factors**

## **Background: Payment Innovation Patterns in China**

Α	Customer Interface	M-POS、Self-Service Terminals
В	Functionality	KJ Payment . Fingerprint Payment
C	Product Grouping	e-Wallet、e-Banking、Credit Card Repayment
D	Channel	Payment As A Channel for Financial Products
E	Service Addition	Marketing Data Risk Service
F	Business Mix	Payment + Credit、Wealth Management、E-Commerce, etc.

#### Background: Payment Risk Profile Trends in China

- 2 Surge of CNP risk is hitting domestic & cross-boarder e-commerce.
- **3** Data-Leakage-Protection continues as a challenge to the industry.
- 4 Cyber-Crime becomes more organized and sophisticated.

## **Challenge: Security Risk Management Focusing Areas**

Security Standards Council

## **Case 1: Attack on Credit Card Vulnerability**

■ Merchant: ABC Motel

■ Budget Hotel, established on 2013/12/27

■ Payment Service: POS Terminal

Merchant	Transaction Time	Transaction Type	Amount
ABC Motel	2013-12-31 11:50:21	Pre-Auth	1.00
ABC Motel	2013-12-31 11:51:20	Pre-Auth Complete	1.00
ABC Motel	2013-12-31 12:16:26	Pre-Auth	1.00
ABC Motel	2013-12-31 12:20:19	Pre-Auth Complete	1.00
ABC Motel	2014-01-02 16:18:25	Pre-Auth	1.00
ABC Motel	2014-01-02 16:19:40	Pre-Auth Complete	1.00

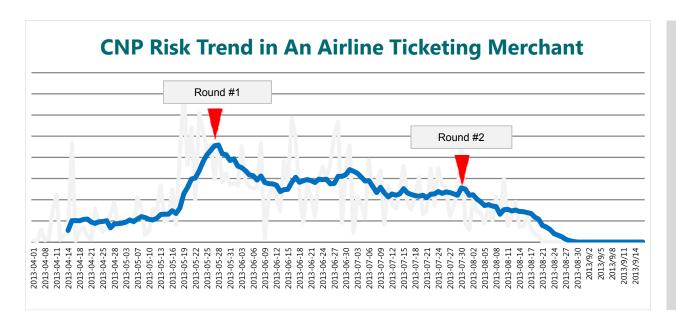

Merchant	Transaction Time	Transaction Type	Amount
ABC Motel	2014-01-03 01:44:38	Pre-Auth	69,000
ABC Motel	2014-01-03 01:53:25	Pre-Auth Complete	79,350
ABC Motel	2014-01-03 18:56:16	Pre-Auth	57,500
ABC Motel	2014-01-03 19:01:50	Pre-Auth Complete	66,125
ABC Motel	2014-01-04 10:59:09	Pre-Auth	75,000
ABC Motel	2014-01-04 11:04:28	Pre-Auth Complete	86,250

#### **Highlights**

- ▲ Small amount card testing
- ▲ Transaction amount abnormal
- ▲ Transaction time abnormal
- ▲ 115% Pre-auth percentage abnormal
- ▲ Massively impact on issuers and acquirers
- ▲ Regulatory sanctions

#### Case 2: CNP Risk on Airline Ticketing

#### **Highlights**

- Vast CNP attack airline ticketing companies
- ▲ Suspicious credit card data leakage
- ▲ Work with merchant to successfully suppressed the attack in 2013
- Assisted in arresting crime organization members

## **Background: About Air China**

Connected to 32 countries 1,62 cities

512 airplanes

323 airlines

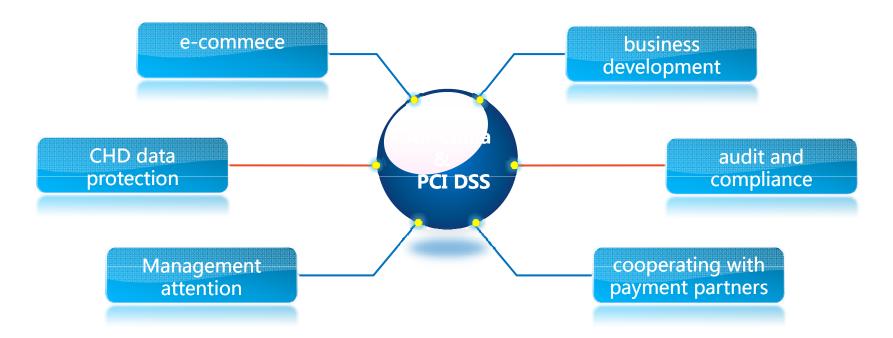

Official airline in China, and afford special tasks

Passenger traffic volume 77.974 million in 2014

## **Background: Motivation from Air China**

#### **Background: Assessors' Place in Payment Industry**

#### atsec's Vision and Mission

Promote the effort of establishing a set of well-thought out, consistent standards for IT security evaluation worldwide.

Prevent re-inventing the wheel or making the same kind of mistakes repeatedly.

Enable western clients to deliver their products/solutions to the Chinese market by facilitating compliance to the Chinese requirements.

Help Chinese organizations to enter the global market or reach global standards requirements by achieving internationally recognized certificates and/or validation (e.g. PCI, CC, FIPS 140-2).

\* CNAS: (China National Accreditation Service for Conformity Assessment ) Laboratory Accreditation (based on ISO/IEC 17025)

2014 Asia-Pacific Community Meeting

## Background (from 99bill): Data Security Management

**PCI-DSS Compliant since 2009 by atsec** 

#### **Other Data Security Compliance Programs**

PBOC	ISO/IEC	Ministry of Public	CUP
Payment Organization	ISO/IEC 27001	Security	ADSS
System Attestation Certificate		Security Level-3 Certificate	

2014 Asia-Pacific Community Meeting

#### Background: Key national standards in China

#### GB 17859 - 1999, "Classified Criteria for Security Protection of Computer Information System"

- •Classifies the security protection capability of Computer Information Systems into five levels:
- •Level 1 Discretionary Protection
- •Level 2 System Audit Protection
- •Level 3 Security Flag Protection
- •Level 4 Structure Protection
- •Level 5 Access Verification Protection

- Discretionary Access Control
- Mandatory Access Control
- Labels
- Identification and

- Object reusea
- Audit
- Data Integrity
- Covert Channel
- Trusted Path
- Trusted Recovery

•Outlines the incremental requirements for each security protection level from security functions in ten aspects:

GB/T 20271-2006, "Information Security Technology - Common Security Technology Requirements for Information Systems"

GB/T 18336.1-2008, GB/T 18336.2-2008, GB/T18336.3-2008

•the Chinese translations of Common Criteria Part 1, Part 2, and Part 3

#### Background: Survillance and authority organizations in China

- The People's bank of China
  - was established on December 1, 1948. In September 1983, the State Council decided to have the PBC function as a central bank.
  - Starting from Sep 2010, PBC issued licenses for payment organizations in China after the assessment (including requirements regarding information security, but also business, performance, etc) according to the "non-financial institutions payment service management measures"(the Chinese name is非金融机构支付服务管理办法); See the list as following: <a href="http://www.pbc.gov.cn/publish/zhengwugongkai/3580/index.html">http://www.pbc.gov.cn/publish/zhengwugongkai/3580/index.html</a>
  - Under the schemas, 2 major certification bodies and a few labs
- Payment & Clearing Association of China
  - PCAC was founded on May 23, 2011, upon the approval of the State Council and the Ministry of Civil Affairs of China. Registered at the Ministry of Civil Affairs as a national non-profit organization, PCAC serves as a self-regulatory body of the payment and clearing service industry of China, and operates under the business guidance and oversight from the People's Bank of China.
  - In Feb 2014, payment security workshops were organized by cooperating with VISA, and atsecting the China.

#### Background: Survillance and authority organizations in China

- Global card brands in China
  - Facilitates collaboration with industry and builds a more secure and trusted payment network in China
  - For example, Visa's QSP (Qualified service provider) program was started from 1 April 2013. See the list who has passed the QSP certification by VISA:
    - http://www.visa.com.cn/merchants/riskmanagement/accountsecurity.shtml
  - PCI QSA validation is one of the requirements for QSP. In addition to that VISA will do audits with respect
    to the requirements related to risks management and GBPP, etc.
  - Acts as an additional oversight layer to acquirer due diligence

■ China Unionpay: Issued Account Date Security Standard (full Chinese name of the standard: 银联卡收单机构账户信息安全管理标准) initially in 2008 (similar security requirements with PCI DSS).

## Looking forward, Challenges faced by China Payment Sector

#### Regulation Competition **Operation** New rivals, domestic 7 **Risk Management** and abroad 5 Compliance 8 **Technology** 2 **Product Innovation Legal System** 6 3 **Talent Operation Efficiency**

#### Challenge: Compliance and certification plan

CHD discovery and network segmentation are challenging

#### Readiness Assessment

(Scope defination, Gap analysis Implementation plan)

In assessment (implementation) Plan based on the gap analysis

Documents work (Include policy, Procedure and related records):

HR, Security management, risk management, IT management...

Network and system remediation(according to gap analysis):

System configuration, DMZ, FIM, IDS/IPS...

#### **Assessment**

Observe system setting, confiqurations

Document reviews

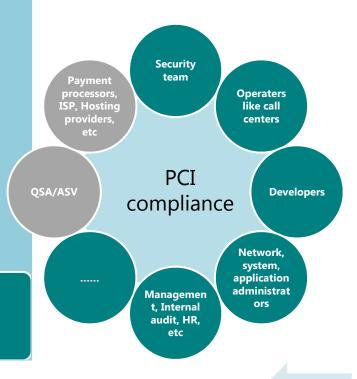

Interviews with personnel

Observe process, action, stste Identify and check sample

Risk Management Penetration Testing ASV

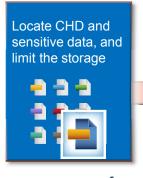

ROC and AOC release and submission

## Approach: PCI DSS Implementation Milestone

2014 Asia-Pacific Community Meeting

Optimizing data: clean up and protect the payment data

Improving business: establish stable and reliable payment environment

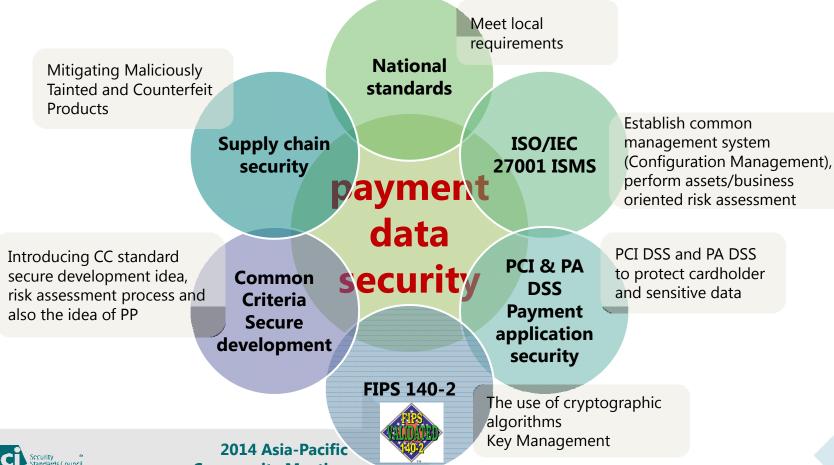

Improving technology: Improve security control measurement comprehensive

## Approach (atsec): Integrated & unified Management System

Approach: Organizational Security

## Approach: Consideration and plan after the initial compliance

Based on PCI DSS, Air China's methodology on data security in the future:

Two steps, five phases

#### Step one: data integration

Integration first

- What data we have;
- Where the data located;
- Who use the data;
- What about risks;
- What levels;
- •

#### Step two: Implementation

Technology implementation

Establishment of terminal security management ability;

Five

phases

- Establishment of data breach prevention ability;
- Establishment of database audit ability;
- Establishment of document centralized management ability
- ....

## 1. Aviation business and the passenger data analysis

- 2. Risks assessment for critical data
- 3. Make the classification and control strategy of aviation business data and passengers data
- 4. Foundation protection of data security
- 5. Improve Air China overall data security management system

## Why security compliance?

Meet the mandatory requirements defined by external cooperating organizations, like card brands, related customers;

#### Increase confidence during the business cooperation

- Survillance organizations or authority organizations;
- Customers, partners, suppliers;
- •Internal organizations or departments

#### Further improve internal management and control

- Improve security management, and integriate high level policy into the business process effecitally;
- Establish measurable method for management and tachnology;
- Enhance the assurance of security control within the organization;
- Enhance the security awareness, and benefit for corporation culture;
- Enhance the investment confidence

#### Reduce cost

- Reduce the cost and investiment for security incident and risks; improve processes on risk management, business continuity and incident response;
- Reduce the cost on the audit or assessment in other area, like due deligance;
- Reduce the insurance cost;
- Clarify the security roles and resonsiblity;
- •Improve competitiveness;
- Establish trust and recoginzation globally

#### Recommendations

- Harmonization with national standards and global standards
- Industry collaboration
- CDE Scope and implementation plan
- Risk-based approach

## Thanks You!
